MEDIA RELEASE

The Kohala Center and the county Department of Research and Development invite Hawaii residents to participate in a free residential energy efficiency workshop.

“How to Save Energy and Lower Your Electric Bill” will be offered 5:30-8 p.m. Thursday, Dec. 9, at Tutu’s House in Waimea.

Since no two households are exactly the same and can differ greatly from one another, this workshop will help participants evaluate possible energy saving measures for their own home.

Workshop participants will learn how to understand their HELCO bill, how to use their electric meter to track down energy waste, how to determine the amount of electricity their electrical appliances and devices use, and how to make smart financial decisions to reduce their home energy usage.

“Hawaii Island residents pay high prices for energy,” said workshop facilitator Yen Chin. “Whether we buy gasoline, propane, or electricity, we pay much more than folks who live on the mainland. So learning how to use less energy can make a big difference for our pocketbooks, and most of us can use a lot less by making small changes in our daily habits.

“My workshop tries to avoid offering sweeping general recommendations. Instead it seeks to show folks how to do an analysis of their own usage, so that they can make well informed decisions,” Chin said. “A family of four that heats water with electricity and pays a monthly HELCO bill of \$250 could save \$25-\$50 per month by seriously applying what they learn at this workshop.”

Participants are encouraged to bring their HELCO bill and a calculator.

Chin has worked for Seattle City Light on residential conservation, for HELCO managing a solar water heater program, and for Hawaii County Economic Opportunity Council conducting energy efficiency workshops for program participants.

The County of Hawaii Office of Research and Development is sponsoring this workshop with grant money from the American Recovery and Reinvestment Act of 2009.

The Kohala Center is partnering with the County to educate island residents about residential energy efficiency as part of the pathway to greater island energy self-reliance.

The Kohala Center is an independent, not-for-profit center for research and education about and for environment. By respectfully engaging Hawaii Island as the world’s most vibrant classroom and laboratory for humanity, The Kohala Center builds teaching and research programs for energy and food self-reliance as well as ecosystem health to

enhance island environments, serve island communities, and advance the work of the academy.

For more information or to sign up for the free residential energy workshop, contact Tutu's House at tutus@tutushouse.org or 885-6777. Participation is on a first-come, first-served basis.
